

Session 1

1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A **program** is a set of instructions written in a programming language that tells a computer or mobile device what to do. Programs help us perform different tasks quickly and automatically. For example, in **Zomato**, a program allows users to select food, place an order, make a payment, and track the delivery. All these actions are controlled by different programs working together.

2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.
Hint: Think of languages like Java, Python, and JavaScript.

Programming Language	Usually
Java	Compiled
Python	Interpreted
JavaScript	Both (compiled and interpreted)

eDraw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.
