

Session :-1

1. Name 5 IT job roles and write one line about what each role does.

Ans:

Software Developer – Designs, writes, and tests computer programs and applications.

Network Administrator – Manages and maintains an organization's computer networks to keep them running smoothly.

Cybersecurity Analyst – Protects computer systems and data from cyber threats and security breaches.

Database Administrator (DBA) – Organizes, secures, and maintains databases to ensure data is stored safely and efficiently.

IT Support Technician – Helps users solve computer, software, and hardware problems and provides technical support.

2. List 3 product companies and 3 service companies with one example of work each does.

Ans:

Product Companies:

- **Microsoft** – Develops software products such as the Windows operating system and Microsoft Office.
- **Adobe** – Creates software products like Photoshop and Acrobat for design and document editing.
- **Google** – Builds products such as Android, Chrome, and Google Search.

Service Companies:

- **Tata Consultancy Services** – Provides software development and IT consulting services for businesses.
- **Infosys** – Offers application development, cloud, and digital transformation services.
- **Wipro** – Delivers IT support, software development, and business technology services.

3. Write the full forms and one-line use of: GitHub, Slack, Jira, IDE, API.

Ans:

Term	Full Form	One-line Use
GitHub	Git Hub (<i>commonly referred to simply as GitHub; not an official acronym</i>)	Used to store, manage, and collaborate on software code using Git.
Slack	<i>Not an official acronym</i> (often expanded informally as Searchable Log of All Communication and Knowledge)	Used for team communication, messaging, and collaboration.

Jira	<i>Not an acronym</i>	Used to track projects, tasks, bugs, and software
Term	Full Form	One-line Use
		development progress.
IDE	Integrated Development Environment	Used to write, edit, debug, and test computer programs in one application.
API	Application Programming Interface	Allows different software applications to communicate and share data with each other.

4. Name any 5 programming languages and mention one popular use case for each.

Ans:

Programming Language	One Popular Use Case
Python	Data analysis, artificial intelligence (AI), and automation.
Java	Building Android applications and enterprise software.

C++	Developing games and high-performance applications.
JavaScript	Creating interactive websites and web applications.
Programming Language	One Popular Use Case
C# (C-Sharp)	Developing Windows applications and games using Unity.

5. What is the difference between a developer and a tester?

Answer in 2 lines.

Ans: DEVELOPER:- A developer creates and maintains software by writing and updating code.

TESTER:-A tester checks the software for bugs, verifies its functionality, and ensures its quality before release.
